

## A New ATM banking experience.

1ST SUMMIT BANK is excited to announce a new ATM banking experience, as we update our older machines with a new generation of ATM's. The new ATM's provide improved features and enhancements, while also increasing the security in protecting your card information. The direction in which you insert your 1ST SUMMIT BANK Check Card is different. Please read below for an overview of these enhancements to help you transition to our new ATM machines.

- The first thing you will notice is the new large color touch-screen display. You can make your service selection directly from touching the instructions being displayed on the screen.
- Your 1ST SUMMIT BANK Check Card should be inserted into the new motorized card reader **Top Edge** first, as indicated by the picture below. This is a more secure way to insert your card so thieves can't steal information from the magnetic strip on the back of the card.

- When a withdrawal transaction is requested, the ATM will eject your Check Card *before* the cash is dispensed. Simply take the card from the reader and then take your cash from the dispensing slot. This enhancement prevents driving away from the ATM and forgetting to take the card from the motorized reader.

- Envelopes are no longer necessary to make a deposit. Simply enter the amount of your deposit and place the cash and checks in the depository slot. The ATM will count and verify the deposit and present verification totals. Once the cash and checks are verified, the deposit will be completed. You can even request the check images to print on the deposit receipt, along with the amount.

We know you will enjoy the new features and enhancements provided by this new generation of ATM banking.
